Peter Fonseca

Senior Software Engineer with 9 years of experience · San Francisco · (707) 889-2431
peter.nfonseca@gmail.com · peternfonseca.com · github · linkedin

Skills

Core: Python, Java, Hack, TypeScript, React, GraphQL, SQL/NoSQL
Infrastructure: AWS, Docker, Microservices, CI/CD, Scripting
Domain: API, ETLs, Data Systems, Regulatory Compliance, Scaling, Healthcare

Experience

Software Engineer · 2025 - present · Meta

- Led notification experiments promoting parental supervision features, driving statistically significant increases in usage, time-spent, and topline DAU
- Diagnosed and resolved cross-team race condition in notification delivery system by implementing a distributed locking mechanism, eliminating duplicate notifications across millions of weekly sends
- Owned client-side parental content pre-approval feature through international launch, achieving strong opt-in rates and measurable engagement gains
- Increased team's mobile test coverage from minimal to comprehensive by developing AI-driven, quality-focused testing workflow, which I used to mentor engineers on the team
- Redesigned parental screentime tracking algorithm, eliminating timezone/DST bugs and improving calculation accuracy. Overhauled observability dashboarding, leading to proactive event stream reconnection implementation.

Sr. Software Engineer · 2019 - 2024 · 23andMe

- Architected ML-to-database integration layer for Medicine Cabinet feature, bridging drug interaction models with graph database to surface personalized contraindication warnings for thousands of customers
- Architected post-acquisition integration of lab ordering systems for Total Health launch, migrating legacy workflows to async processing pipeline and enabling seamless order fulfillment across merged platforms
- Created a pre-approved Medical Device API, replacing FDA legal reviews and accelerating new health feature launches from months to weeks

Software Engineer · 2016 - 2019 · 23andMe

- Led a team of engineers to ship the company's first recurring revenue product (personalized ancestry book) in partnership with an external printing vendor, delivering on tight deadline ahead of holiday sales
- Hired, mentored and led a team of five engineers across three concurrent projects, fostering growth of our talent pool
- Owned and scaled the external-facing API + developer program
- Led an API working group, defining architectural patterns across all teams

Personal Projects

Studio1Way (studio1way.com)
Full-stack art portfolio

- Java Spring Boot / GraphQL / React

API Buddy
Open source HTTP API CLI tool written in Python

- 100% code coverage

Education

App Academy (2016) · **UC Santa Cruz**, BS in Biology (2014)
